Hepatitis B Vaccination - 3 doses of <i>Energix-B, Recombivax or Twinrix</i> vaccines or 2 doses of <i>Heplisav-B</i> vaccine followed by a QUANTITATIVE Hepatitis B Surface Antibody test drawn 4-8 weeks after last vaccine dose. A test titer ≥ 10 mIU/mL is positive for immunity. If the test result is negative, repeat another Hepatitis B vaccine series followed by a repeat test titer. If the Hepatitis B Surface Antibody test is negative after the repeat vaccine series, a "non-responder" status is assigned. See: http://www.cdc.gov/mmwr/pdf/rr/rr6210.pdf for more information. Hepatitis B Vaccine Non-responder	If the Hepatitis B Surface Antibody test is negative (titer less than 10 mIU/mL) after a primary and repeat vaccine series, vaccine non-responders should be counseled and evaluated appropriately. Certain institutions may request signing an "acknowledgement of non-responder status" document before clinical placements.			<input type="checkbox"/>
Additional Documentation				
<u>Some institutions</u> may have additional requirements depending upon rotation, school requirements or state law. Examples include meningitis vaccine which is mandated in some states if you live in dormitory style housing.
