Hepatitis B Vaccination - *3 doses of Engerix-B, PreHevbrio, Recombivax HB or Twinrix vaccines or 2 doses of Heplisav-B vaccine followed by a **QUANTITATIVE** Hepatitis B Surface Antibody test drawn 4-8 weeks after last vaccine dose. A test titer ≥10mIU/mL is positive for immunity. If the test result is negative, CDC guidance recommends that HCP receive one or more additional doses of Hepatitis B vaccine up to completion of a second series, followed by a repeat titer test 4-8 weeks after the last vaccine dose. If a single additional vaccine dose does not elicit a positive test result, administer additional vaccine doses to complete the second series using the schedule approved for the primary series of a given product. If the Hepatitis B Surface Antibody test is negative (<10 mIU/mL) after receipt of 2 complete vaccine series, a "non-responder" status is assigned. See: http://dx.doi.org/10.15585/mmwr.rr6701a1 for additional information.*				Copy Attached

Hepatitis B Vaccine Non-responder	If the Hepatitis B Surface Antibody test is negative (titer less than 10 mIU/mL) after a primary and repeat vaccine series, vaccine non-responders should be counseled and evaluated appropriately. Certain institutions may request signing an "acknowledgement of non-responder status" document before clinical placements.

TUBERCULOSIS (TB) SCREENING – *All U.S. healthcare personnel are screened pre-placement for TB. Two kinds of tests are used to determine if a person has been infected with TB bacteria: the TB skin test (TST) and the TB blood test (IGRA). Results of the last two TSTs or one IGRA blood test are required **regardless** of prior BCG status. If the TST method is used, record the dates and results of two 1-step annual TSTs over the last two years, or of one 2-step TST protocol (two TSTs performed with the second TST placed at least 1 week after the first TST read date). In either series, the second TST must have been placed within the past 12 months prior to clinical duties, and must have been performed in the U.S. If you have a history of a positive TST (PPD) >10mm or a positive IGR blood test, please supply information regarding any evaluation and/or treatment below. You only need to complete ONE section, A or B.*

Skin test or IGRA results should not expire during proposed elective rotation dates or must be updated with the receiving institution prior to rotation.
